

UN CLIMATE CHANGE CONFERENCE (COP27) 6-18 NOVEMBER 2022, EGYPT

OCEAN PAVILION SIDE EVENT

Ocean observations for climate change: From local observations to a global system

Thursday 10th November 2022,

16:30 - 18:00 EET

Our vision to build the global ocean observing system is a bold, urgent, and achievable step that we can take to mitigate and adapt to climate change. It is the only way to truly understand whether and for how long the ocean will absorb carbon, and thus protect the planet from the disastrous effects of climate change. We will present a variety of perspectives on ocean observing, from coastal to open ocean and from high latitudes to the tropics and discuss collaboration towards our common vision.

SPEAKERS:

Anya Waite (Ocean Frontier Institute, Canada, and GOOS), **Ed Hill** (National Oceanography Centre, UK, and POGO), **Sabrina Speich** (Ecole Normal Supérieure & Institut Pierre Simon Laplace, France, and GCOS/ GOOS), **Mike Savage** (Mayor of Halifax, Canada), **Jim Edson** (Woods Hole Oceanographic Institute, USA), **Mike Meredith** (British Antarctic Survey, UK), **Hadeer Abdou** (Suez Canal University, Egypt), **Pedro Carrasco de la Cruz** (Helmholtz Institute for Functional Marine Biodiversity, Germany)
